

Task:

You need to create a front-end application that fits this requirements:

- 1- If the user is not logged-in, redirect him/her to the login page.
- 2- If the user does not have an account, he/she can navigate to a register page.
- 3- The user can't view any page without authentication.
- 4- On the main page show a list of all movies.
- 5- The user can create a new movie
- 6- The user can edit any movie on the website
- 7- The user can delete any movie on the website
- 8- The user can browse movies by category.

Note That: the api contains a CRUD for categories but you are not required to use it.

The API domain is : <https://test-api.storexweb.com>

You can download the postman collection from: [Here](#)

Once your project is ready, push it to github.com and email the repo link to: bahaa.k@storexweb.com, make sure it is public.

Feel free to design the website the way you like.

NOTES:

- The UI is not a priority yet a clean understandable one is a bonus.
- We will only focus on your code quality and how scalable it is.

When all participants' tests are evaluated you will receive an email that notifies you if you were accepted or not, in case you were accepted an offer will be attached with the email.

GOOD LUCK
